

CASES STUDY: 3PL Supply Chain Management

DELIVERING STEP-CHANGE SUPPLY CHAIN TRANSFORMATION

Background:

Supply Chain Solutions is a global organization that provides supply chain management solutions. We focus our activity on sectors as demanding as automotive, distribution, industrial, beverages, utilities and the military.

We focus on solving the logistics challenges of our customers with the aim of reducing operating costs and improving the efficiency of their supply and/or distribution chains.

Challenge:

Currently, distribution is facing a series of challenges due to the change from traditional models (retail) to new models (e-commerce). These challenges focus on a change in the consumption pattern and where understanding the supply chain is essential. During the last 5 years from TVS we have helped one of our clients (RETAIL of DIY articles) in the design, implementation and management of their distribution model. The main challenges of the project have been the design (Green Field) from scratch of its logistics model (Distribution Platform + Transport Network), design and construction "turnkey" of its logistics platform in Valencia, design and implementation of a customized EMS (own source code) and the operational management of the platform.

The TVS SCS Solution:

- Tailor-made solution to meet the needs of the client.
- Development "Turnkey" platform in Valencia.
- Development of an own EMS.
- Development of a BIR (Business Intelligence Reporting) system.
- Outsourcing of operational management (Cross Dock, Milk Run, Order Picking etc.)
- Integration with client systems.
- Management of national distribution transport and intra-store transport.
